cv03	0	U+0066 f, U+017F ſ	With hook
ss01	0	U+0061 a	Double-storey
ss03	0	U+006A j, U+006C l, U+0074 t	Without tail
ss04	0	All glyphs with cedilla	Turn cedillas to commas

* Default Value

† including their derivatives

How to access OpenType Features in LibreOffice

Where you pick a font, type a colon (U+003A) following the font name. Add the de-sired feature ID listed above (first column) followed by an equal sign (U+003D) and the value. The equal sign and the value may be omitted, which means the value is 1. If multiple features are desired, separate them with an ampersand (U+0026).
E.g.
"January: ss01=1" or "January: ss01" will turn on Substitute Set 01.
"January: liga=0" will turn off Standard Ligatures.

Warning of Use of Private Glyphs

It is strongly recommended that you access the alternate glyphs through OpenType features and NOT use any glyphs coded U+E000 – U+F800 directly because they are of limited interoperatability.

More information

Glyph Coverage

Currently, the repertoire fully covers Latin-1 and Latin Extended-A.

Note that this font targets Latin, Greek and Cyrillic scripts. Characters outside the scope are unlikely to be added in the future.
